

KANSAS ENVIROTHON HISTORY

The Envirothon Program is a hands-on environmental problem-solving competition for high school-aged students. Participating teams complete training and testing in five natural resource categories: i.e. soils and land use, aquatic ecology, forestry, wildlife and current environmental issues. The current issue changes each year.

The Envirothon Program was first started by the Pennsylvania Soil and Water Conservation Districts in 1979 and was known as the “Environmental Olympics” which was later shortened to “Enviro-Olympics”. This competition quickly gained popularity and the program grew rapidly and the 1987 Pennsylvania State Enviro-Olympics involved 40 conservation district teams which provided visibility and stimulated interest from neighboring states.

In 1988, the program became known as the Envirothon with 3 states – Pennsylvania, Ohio, and Massachusetts, competing in the first “National Envirothon”.

In the summer of 1991, Peggy Ricker read in the NACD publication ‘*The Tuesday Newsletter*’ about the National Envirothon competition that had just been held in Maine. Peggy contacted the Ohio Envirothon representative to obtain more information and then decided that this program was what she was looking for to entice high school students to learn more about conservation.

Peggy, with the approval of her board of supervisors, wrote a resolution that was presented at the 1991 KACD Convention. It was introduced at the KACD Youth and Education Committee meeting, and later approved at the general business session by all the supervisors.

Peggy was appointed coordinator of the Kansas Envirothon competition. The first competition was held at Fall River Reservoir in Greenwood County with three counties – Greenwood, Pottawatomie and Riley participating. At the 1992 National Envirothon held in the state of Maryland, Kansas along with Nebraska and Idaho were the first states west of the Mississippi River to join the competition. It was also the first time a Canadian team, Nova Scotia, participated.

As in any project that develops and grows, there are growing pains. On the National level came logistics with the expanding number of states and provinces, name change from “National Envirothon” to “Canon Envirothon”, Envirothon name registered, logo trademarked, incorporated, 501(c)3 status, and hiring an executive director and paid staff.

Kansas’ participation in the “Canon Envirothon” has not been without its successes. In 1996 the Kansas team won the Forestry Station Championship and in 1998 Kansas won the Oral Station Championship, posting the highest score ever received and still holds that record today. In 1998 the Kansas team also placed fourth overall, the highest the state has ever placed. The Canon Envirothon provides the opportunity to earn scholarships and canon products as prizes. The Canon Envirothon has become one of

North America's largest high school environmental education competitions. On the state level students receive t-shirts and medals for the top three places in each category.

In 1999 Janice Plummer joined Peggy Ricker as co-chair of the Kansas Envirothon and in 2009 the Kansas Envirothon website was developed. In 2010 the rules were changed from allowing one team per county to attend the Kansas competition to allowing one team per school.

The Envirothon works in partnership with local conservation districts and other government agencies and organizations. Through the years the Envirothon competition has gained several dedicated financial supporters. Donations and grants is the source of funding for the competition.

On the Kansas level we have had 43 counties participate with an Envirothon team at some time in the past 19 years. County participation varies when teachers retire or change schools, or you have a change in conservation district employees. The date and location of the competition and school finances all are determining factors on whether a team attends the competition or not.
